

Student Management Transportation Access

SMT manages student's custodial and transportation information and communicates it immediately to those staff members who need to know!

"SMT gives our parents, staff, and students a level of security that is unparalleled. It is truly a remarkable management system!" "I love it!"

Angelia Ballinger,
Principal Walker
Elementary

"I like the parent pick up process because the school staff places my child in the back seat once verified by the system and I never have to get my toddler out of the vehicle."

Stacey Guffey, Parent

"Having children and grandchildren over the past 25 years in schools in Atlanta, Nashville, and Cincinnati, this is the safest parent pickup process yet."

Margaret Conyers, Grandmother

"Education has always been a top priority for my kids...however, safety must come first. With the new system in place, I have no worries about the safety of my child at pick up time. The staff at AES knows exactly who my child can leave with when I can't be there to pick them up."

Eddie Tallent, Parent

"A solution that will empower other administrators in keeping our children safer!"

Tim Armstrong, Principal

SMT was inspired by a principal with 18 years' experience for other principals.

Student Management Transportation is a highly versatile software used by school personnel to manage communicate and document student information to all staff in real time. No special software or hardware required by parents or students. All information is stored on school file server.

- Simplifies parent pickup process
- Prints bus tickets and/or bus lists when changes occur
- Real-Time Information
- All actions are stored historically in log files
- Uses visual references from stored photos
- Can easily manage and document all visitors
- Prints visitor tags from scanned Driver's license
- Communicates sexual predator's photos to staff
- All-inclusive authorized list per student
- Keeps up with custody issues and joint custody schedules issued by courts
- Produces student tags for emergency reunification
- Works seamlessly across iPad, Windows, Mac devices
- This can be used during normal parent pick up (drive through) and after school programs (walk-up) so that students leave only with authorized individuals.
